Senior .NET Developer — Open Application

Dear Hiring Team,

I am a Senior .NET Developer with over 20 years of professional experience, currently based in Wallisellen (Zurich area), Switzerland. I am actively seeking a challenging full-time position where I can apply my deep expertise in **C#**, **.NET Core**, **cloud technologies**, and **modern software architecture** to build high-quality enterprise software.

Throughout my career I have designed and developed **backend services**, **RESTful APIs**, and **distributed systems** across diverse industries. At **Bystronic Group** in Switzerland, I built backend services for an industrial **SaaS platform** using **.NET 6–8**, implemented **CI/CD pipelines** in **Azure DevOps** with **Docker**, and worked in cross-functional **Scrum teams**. In previous roles I developed enterprise applications on **AWS**, optimized **SQL Server** performance, and modernized legacy .NET systems.

I am committed to **software quality**: I follow **Clean Architecture**, **SOLID principles**, and **Test Driven Development**. In my current role I have authored over **1000 automated tests** and built a scalable test automation framework. On the frontend I bring hands-on experience with **React**, **Angular**, and **TypeScript**. I also actively develop **Android applications** with **Kotlin** and **Jetpack Compose**, and integrate **AI/LLM APIs** in my personal projects.

I hold a **Master's degree in Computer Systems & Networks** (with honors). I am a self-driven, structured, and solution-oriented engineer who thrives in collaborative environments. I speak English at C1 level and German at B1 level, and I am available immediately.

I would welcome the opportunity to discuss how my experience and skills can contribute to your team. Please feel free to reach out — I look forward to connecting.

Kind regards,

Viktor Ralchenko
